Sewer Pump Station Alarm Monitoring

Protect yourself from liability due to sewage lift station wetwell spills and equipment failures while the station is un-manned. Safety and reliability comes in the form of retrofitting the lift station with a cellular or phone alarm auto dialer. The alarm dialer can be wired to the lift station controls to provide synthesized voice alarm annunciation for typical alarms such as:

Get the Alarms You Need!

- Pump failures
- High wet well level before spill occurs
- Low/low wetwell below pump shut off
- Submersible motor over temperature
- Submersible motor moisture detection
- Security breach from vandalism

The alarm dialer can be setup to automatically dial a list of authorized telephone numbers and pagers contacts to respond to the alarm condition before an alarm becomes a liability. Environmental cleanup and fines from sewage spills can be very expensive.
